Claim Rejections - 35 USC § 112/101

Claim 6 provides for the use of the polyether as defined in claim 1, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 6 is also rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyanaga et al (WO 99/42513).

Miyanaga et al ["Miyanaga"] disclose a method for producing a polyether having a high degree of polymerization which comprises a ring-opening polymerization of at least one substituted epoxide in the presence of a rare earth metal compound represented by formula (I) in

the abstract. The examiner is of the position that the polyether represented by formula (V) wherein R^5 is a hydrocarbon group having 8-50 carbon atoms which may have a substituent, and c is a number being 150 on average, meets the limitations of the oil soluble polyether compound of the claims. The polymers of Examples 1, 2, and 3, a stearyl glycidyl ether polymer, appear to meet the limitations of the polyether component of the claims. Miyanaga sets forth in Table 1 that these polymers result in gelling in liquid paraffin oil, myristic acid and soybean oil, i.e., the rheology of the oils is affected. Thus the examiner is of the position that Miyanaga meets the limitations of the claims which are drawn to a method of controlling the rheology of an oil which comprises adding to the oil a polyether compound.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.
